Introduction

The new **Trane XStream™ Excellent** series is the result of a search for higher reliability and higher energy efficiency, for today's environment.

XStream Excellent come in two versions to allow customers to make the best choice according to his main criteria, whether they are economical or environmental:

XStream Excellent GVWF with R134a refrigerant **XStream Excellent GVWF XSE G** and **GVWF G** with R1234ze refrigerant

EcoWise™

XStream™ Excellent GVWF G chillers with **R1234ze** low GWP refrigerants are part of the **EcoWise™** portfolio of products that are designed to lower their environmental impact with next-generation, low global warming potential (GWP) refrigerants and high-efficiency operation.

In an effort to reduce energy consumed by cooling and to continually operate, Trane has developed the **XStream Excellent** chillers with higher efficiencies and a more reliable design than any other water-to-water equipment available on the market today.

The **XStream Excellent** uses the High Speed Centrifugal compressors.

The industrial-grade design of this chillers is ideal for both industrial and commercial markets, in applications such as office buildings, hospitals, schools, retail buildings, and industrial facilities.

The major advantages of the **XStream Excellent** are:

- Very low environmental impact thanks to near zero GWP (<1) R1234ze refrigerant.
- High efficiencies specially at part load
- Great versatility to adapt to varying applications requirements

Features and benefits

High Speed Centrifugal Compressors

- Two stages, high speed centrifugal compressors with higher aerodynamic efficiency
- Magnetic bearings provide quiet, reliable and 100% oil free operation
- Soft start module significantly reduces high in-rush current at startup
- Integrated variable frequency drive
- Variable speed adjusts to changes in load and/or condensing temperature
- One main moving part. The two impellers are keyed directly to the motor rotor.

CHIL evaporator

Trane developed an evaporator specially designed for **XStream Excellent** chillers. Compact - High performance - Integrated design - Low charge (CHIL) evaporator optimizes the flow of the refrigerant to get an excellent heat exchange with water in every operating condition and minimize the quantity of refrigerant used;

Features and benefits

Variable Primary Flow

An attractive chilled-water system option may be a variable primary flow (VPF) system. VPF systems present building owners with several cost-saving benefits that are directly related to the pumps. The most obvious cost savings result from eliminating the secondary distribution pump, which in turn avoids the expense incurred with the associated piping connections (material, labor), electrical service, and variable-frequency drive.

Building owners often cite pump related energy savings as the reason that prompted them to install a VPF system. With the help of a TRANE software analysis tool, you can determine whether the anticipated energy savings justify the use of variable primary flow in a particular application. It may also be easier to apply variable primary flow in an existing chilled-water plant.

Unlike the “decoupled” design, the bypass can be positioned at various points in the chilled-water loop and an additional pump is unnecessary. The evaporator can withstand up to 50% percent water flow reduction as long as this flow is equal to or above the minimum flow-rate requirements.

The microprocessor and capacity control algorithms are designed to handle a maximum of 20% change in water flow rate per minute.

Factory Testing Means Trouble-Free Start-up

All **XStream Excellent** chillers are given a complete functional test at the factory. This computer-based test program completely checks the sensors, wiring, electrical components, microprocessor function, communication capability, expansion valve performance, and fans. In addition, each compressor is run-tested to verify capacity and efficiency. Where applicable, each unit is factory preset to the customer’s design conditions. An example would be the leaving-liquid temperature set point. The result of this test program is that the chiller arrives at the job site fully tested and ready for operation.

Factory-Installed and Tested Controls and Options Speed Installation

All **XStream Excellent** chiller options are factory installed and tested. Some manufacturers send accessories in pieces to be field installed. With Trane, the customer saves on installation expense and has assurance that ALL chiller controls and options have been tested and will function as expected.

Superior Control with Symbio™ 800 Chiller controls

The Adaptive Control™ microprocessor system enhances the **XStream Excellent** chiller by providing the very latest chiller control technology. With the Adaptive Control microprocessor, unnecessary service calls and unhappy tenants are avoided. The unit does not nuisance-trip or unnecessarily shut down. Only when the chiller controls have exhausted all possible corrective actions and the unit is still violating an operating limit, will the chiller shut down. Controls on other equipment typically shut down the chiller, usually just when it is needed the most.

Features and benefits

SmartFlow control

XStream Excellent series units are fully compatible with variable flow operation both on evaporator and condenser sides. The modulation of the pump speed is managed to ensure that chiller ΔT stays constant. Entering and leaving temperatures at the evaporator will be measured directly by the chiller controller, through the factory-supplied sensor. A ΔT setpoint will be present on the unit controller. The option for constant ΔT is intended to be used with 3-way valves on water systems, or 2-way valves on water system but constant flow at the by-pass.

Series counterflow chiller configuration

When considering multiple chillers plant, designers conventionally go for parallel-piped chillers configuration. Nevertheless, there are ways to bring more efficiency by using a different chiller lay-out.

An effective alternative to consider is to pipe the chillers in series. Larger ΔT and low flow design save energy on the pumping. Series chiller configuration allows as well, to get a better efficiency from the upstream chiller, more lightly loaded. Combining this configuration with Variable Primary Flow (VPF) will further increase system efficiency.

Series piping principle can also be applied to condenser side. This is called Series-Series counterflow configuration. This will result in similar advantages on the condenser side, enlarging the opportunity for savings on the overall system.

For more information on Series chillers arrangements, refer to Trane Application Engineering Manual about Multiple-Chiller system design and control (SYS-APM001).

Product certification

Trane as a Global leader in the HVAC industry participates to both Eurovent and AHRI chillers certification programs. Through this third party certifications, Trane commits to deliver units that comply with the declared performance.

Base unit description

	GVWF	GVWF XSE G / GVWF G
Power supply	400 V - 3 Ph - 50 Hz - Single point	
Compressor type	High Speed Centrifugal	
Compressor technology	Magnetic bearings – Oil free	
Number of circuits	1 or 2	
Compliance	CE - PED	
Refrigerant	R134a	R1234ze
Relief valve	Single relief valve on condenser	
Evaporator water connections	Direct Connection - Grooved pipes	
Evaporator water side pressure	10 bars	
Condenser water connections	Direct Connection - Grooved pipes	
Condenser water side pressure	10 bars	
Flow Control	Constant Flow - Pump signal On/Off (Condenser + Evaporator)	
Power protection	Fused	
Electrical IP protection	Enclosure with Dead Front protection	
Installation accessories	Optional	

Options description

Option Description		Application	
Power			
400 V - 3 Ph - 50 Hz - Dual point	2 distinct power supplies, one per circuit - available for units of group 2, see below	Renovation. Replacement of two smaller units by one only.	●
Disconnect switch with Fuses		Power protection	●
Disconnect Switch with Circuit Breakers		Power protection	●
Condenser Application			
Hot Water Leaving temperature control		Water to Water Heat Pump	●
Acoustics			
Sound attenuation package	Additional refrigerant lines insulation	Overall reduction of Sound Power level by -3dB(A)	●
Relief Valve			
Single relief Valve on both condenser and evaporator	Additional relief valve on Low pressure side	Additional pressure safety device	●
Dual Relief valve on condenser only	2 relief valve with bypass 3 way valve on high pressure side	Maintenance	●
Dual relief Valve on both evaporator and condenser	2 relief valve with bypass 3 way valve on both high and low side	Maintenance	●
Evaporator water connection			
Left hand Connection	Position of water box on the right side of the unit (facing control panel) - available for units of group 1, see below Additional pipe allowing Evaporator connections on the right side of the unit (facing control panel) - available for units of group 2, see below)	Supply and return water on the same side of the unit	●
Right hand connection	Position of water box on the left side of the unit (facing control panel) - available for units of group 1, see below Additional pipe allowing Evaporator connections on the left side of the unit (facing control panel) - available for units of group 2, see below	Supply and return water on the same side of the unit	●
No insulation on cold parts	Unit delivered without insulation on Evaporator and cold parts	For field supplied insulation by customer	●
Condenser water connection			
Left hand Connection	Position of water box on the right side of the unit (facing control panel) for GVWF 190-215-260-300-135G-160G-185G-210G-250G only Additional pipe allowing Evaporator connections on the right side of the unit (facing control panel)	Supply and return water on the same side of the unit	●
Right hand connection	Position of water box on the left side of the unit (facing control panel) for GVWF 190-215-260-300-135G-160G-185G-210G-250G only Additional pipe allowing Evaporator connections on the left side of the unit (facing control panel)	Supply and return water on the same side of the unit	●
Condenser thermal insulation	Thermal insulation of condenser	Heat Pump application to avoid wasted heat	●

Options description

SmartFlow Control			
VPF Constant Delta T Evaporator	Optional PC board delivering a 2-10 V modulating signal output to control a pump motor speed inverter	Evaporator variable speed pump control based on a constant Delta T	●
VPF Constant Delta T Condenser	Optional PC board delivering a 2-10 V modulating signal output to control a pump motor speed inverter	Condenser variable speed pump control based on a constant Delta T	●
VPF Constant Delta T Evaporator and Condenser	Optional PC board delivering a 2-10 V modulating signal output to control a pump motor speed inverter	Evaporator and Condenser variable speed pump control based on constant Delta T's	●
Smart Com protocol			
BACNet MSTP interface	Communication card	Communication with BMS through BACNet MSTP Protocol	●
BACNet IP interface	Communication card	Communication with BMS through BACNet IP Protocol	●
ModBus RTU interface	Communication card	Communication with BMS through Modbus Protocol	●
LonTalk Interface	Communication card	Communication with BMS through LonTalk Protocol	●
External setpoints & capacity outputs	Programmable Input/Output card and sensors	Remote Control or remote monitoring	●
Outdoor AirTemp Sensor	With Outdoor AirTemp Sensor	Measurement of Outdoor ambient air temp to perform water set point offset	●
Electrical IP Protection	IP 20 protection	Electrical safety	
Master slave operation	Communication card	Operation of two chillers on a same water loop	●
Energy metering	Additional energy meter	Monitors electricity consumption (kWh) of the full unit	●
Condenser Refrigerant Pressure Output			
Condenser Water Control Output	Communication card - 0-10 V Analog output	Allows to control a valve on condenser loop to perform proper unit start when condenser water loop is cold	●
Condenser Pressure (%HPC) Output	Communication card - 0-10 V Analog output	Allows control of cooling device based on condenser pressure (I.e. Cooling tower fan, 3-Way valve....)	●
Differential Pressure Output	Communication card - 0-10 V Analog output	Allows control of a 3-way valve on condenser water loop	●
Power socket	230 V Power socket	Local Power source to connect an electrical device such as a Laptop	●
Flow Switch			
Evaporator or Condenser Flow switch	One Flow Switch delivered to be installed either on Evaporator or Condenser side	Allows to check flow detection	▲
Evaporator and Condenser Flow switch	Two Flow Switches delivered to be installed respectively on Evaporator and Condenser side	Allows to check flow detection	▲
Accessories			
Neoprene isolators			▲
Neoprene pads			▲
Grooved pipe with coupling & pipe stub	4 Grooved pipe adapters	Allows welded connection to unit	▲

● Factory mounted ▲ Accessory (not fitted)

(1) Evaporator 12/7°C and 0.0 m²K/kW, and condenser at 30/35°C and 0.0 m²K/kW.

(2) Net performances calculated as per EN 14511-2022.

(3) $\eta_{s,c}$ / SEER as defined in Directive 2009/125/EC of the European Parliament and of the Council with regard to Ecodesign requirements for Comfort Chillers with 2000 kW maximum capacity - COMMISSION REGULATION (EU) N° 2016/2281 of 20 December 2016.

(4) SEPR High temperature as defined in Directive 2009/125/EC of the European Parliament and of the Council with regard to Ecodesign requirements for Comfort Chillers with 2000 kW maximum capacity - COMMISSION REGULATION (EU) N° 2016/2281 of 20 December 2017.
